

Tugas2 (HASHTABLE)

1. Method Find

```
public void find(int key){
    int row = hashFunction(key);
    int index=0;
    boolean check = false;
    Node current = table[row];
    while(current != null){
        if(current.data == key){
            check = true;
            break;
        }
        current = current.next;
        index++;
    }

    if (check)System.out.println("Baris : "+ row + ", Index : " + index );
    else System.out.println("Data tidak ditemukan");
}
```
